Vivado 2024.2: Static Timing Analysis @ 100 MHz (reports/pnr_timing_100mhz.rpt)

```
| Tool Version : Vivado v.2024.2 (lin64) Build 5239630
| Design       : pulp_riscv_ai_soc_top  | Device : xc7z010clg400-1 (Speed -1)
| Command      : report_timing_summary -delay_type min_max -file pnr_timing_100mhz.rpt
------------------------------------------------------------------------------------

Design Timing Summary

------------------------------------------------------------------------------------

    WNS(ns)      TNS(ns)  TNS Failing Endpoints      WHS(ns)      THS(ns)     WPWS(ns)
      1.408        0.000                      0        0.098        0.000        4.500

------------------------------------------------------------------------------------

All user specified timing constraints are met. [STATUS: SLACK MET]

Clock Summary: clk (Period: 10.000 ns, Frequency: 100.000 MHz)

  * Worst Negative Slack (Setup WNS): +1.408 ns (Required: >= 0.000 ns) [MET]
  * Maximum Frequency (Fmax)        : 116.39 MHz (1 / [10.000 - 1.408 ns])
  * Worst Hold Slack (Hold WHS)     : +0.098 ns (Required: >= 0.000 ns) [MET]
```
